OPTIMIZED FROM ORBIT:

SATELLITE CONNECTIVITY WITHOUT COMPROMISE

MAKE STARLINK BUSINESS-READY WITH BIGLEAF

Low Earth Orbit (LEO) satellite technology providers such as Starlink are transforming access to broadband. But on its own, it may not support business-critical cloud apps the way you need. Latency fluctuations, performance variability, and the risk of data overages can hold your customers back, especially when real-time tools like VoIP and video conferencing are required for normal business operations.

That's where Bigleaf comes in.

Bigleaf helps Starlink become your reliable, optimized business connection, without compromise.

WHY BIGLEAF + STARLINK?

Same IP Failover

Same IP Failover across Starlink, LTE, fiber, and any other wired or wireless connection—no dropped calls or broken sessions.

Multiple-Circuit Support

Multiple-circuit support (Up to four connections: Starlink + Starlink, or Starlink + 5G/fiber) with dynamic load balancing.

App-Class Traffic Control

App-class traffic control to steer priority traffic over the best-performing path for optimal cloud application performance.

Avoid Starlink Overages

Avoid Starlink overages by keeping non-essential traffic off your metered connection.

Real-Time Visibility

Real-time visibility into traffic performance, usage, and circuit health.

Plug-and-Play Simplicity

Plug-and-play simplicity that deploys in minutes with no complex policies or scripts.

OPTIMIZED FROM ORBIT:

SATELLITE CONNECTIVITY WITHOUT COMPROMISE

MAXIMIZING STARLINK WITH BIGLEAF

Starlink unlocks access. Bigleaf unlocks performance. Together, they deliver optimized, reliable connectivity that:

Improves Unpredictable Connections

Bigleaf automatically adjusts to changing network conditions and provides seamless IP failover between multiple internet links.

Solves Fluctuating Performance

With bi-directional dynamic QoS that prioritizes critical applications, Bigleaf ensures consistent performance even when wireless network conditions vary.

Eliminates Complex Configuration

Plug-and-play setup (less than 10 min) simplifies the configuration of wireless networks, making it easier for businesses to manage their connectivity without specialized and costly technical resources.

Prevents Limited Visibility

Bigleaf provides real-time monitoring and insights into network performance, allowing businesses to identify and address wireless connectivity issues proactively.

Embrace the Future of Connectivity

As technology evolves, so do connectivity options. Starlink is just the beginning. Stay ahead of the curve with Bigleaf, by leveraging emerging technologies like LEO satellite internet to scale and future-proof your network.

Request a free demo today and see exactly how bigleaf makes Starlink business-ready.
